A RECORD ON THE FLOOR

Three Go-Lives in One Night — and the Heaviest Queue Yet

Aaron Levine, Over The Moon and Minnow all crossed on Thursday, the most GoodDay has ever launched in a single day. Underneath it: ~263 Pylon tickets, a 931-row returns failure at Poncho, and three merchants walking away from the same incumbent.

BY THE GAZETTE DESK · REPORTING JULY 31 – AUGUST 7, 2026

Thursday, August 6, is now the busiest launch day in company history. Aaron Levine went live on Scale, Over The Moon on Bergen — both run by Seth Horton — and Minnow on IDE, run by Hunter Leeming with River Crawford doing most of the legwork. Willy Husted posted the warning to #engineering at 12:29 p.m.: "there are effectively 3 go lives this evening... Hold off on deploys rest of day unless necessary." Cloth & Paper had already crossed on Tuesday, beating its original 8/14 target. Four launches in four days, against a WMS tracker that says August should hold eleven.

None of the three went cleanly, and that is the more interesting story. Aaron Levine's 4 p.m. cutover broke immediately: the Scale integration, scoped to business unit ALV, was pulling SKUs belonging to Scale's other customers, so the account's inventory levels could not be resolved. Two hours of internal troubleshooting, an escalation to Scale, and a configuration fix from Willy later, it was live. Over The Moon — a catalog of roughly 350,000 SKUs whose first sync attempt overloaded the database — went only because Kevin Samoei finished and tested Shopify tag filtering (GD-12854) that morning. Minnow's cutover carried 88 SKUs and nearly 2,500 units of variance into the reconciliation.

The queue paid for the volume. Pylon opened roughly 263 tickets in the window, the heaviest week the Gazette has tracked, above No. 12's ~227 and No. 5's 202. Engineering shipped 15 production releases across seven days, every one flagged yellow on schema drift. And on Thursday evening Willy's investigation of a 931-row spreadsheet from Poncho Outdoors turned up 228 customers whose returns had been restocked in ShipHero five or more days earlier and never refunded (P.5).

The commercial side had a pattern of its own: three separate merchants — Fleur du Mal, Diane von Furstenberg and Ramy Brook — all moved on GoodDay in the same five days, all leaving RLM, all sitting on Bergen (P.2). Saint Art NY signed on Tuesday. And Evan Smith finally got a meeting with Intuit after roughly a year of being told GoodDay was too small (P.3).

THE WEEK BY THE NUMBERS	
Go-lives	4
Pylon tickets opened	~263
Prod deploys	15
PRs merged (wk)	86
MS-team Gong calls	62
Sers Tavern threads	54
Ticket volume of ~263 is a new tracked high — above No. 12's ~227, No. 5's 202 and No. 1's 180. Derived from the highest and lowest Pylon issue numbers in the window (9583 – 9321 + 1), with minor gaps in the sequence.	

LEAD II · THE PIPELINE

Three RLM Refugees in Five Days

Fleur du Mal kicked off Monday, DVF demoed Wednesday, Ramy Brook demoed Thursday — all three leaving RLM, all three on Bergen Logistics. Ramy Brook's Jeff Green wasn't complaining about the product; he said he felt nickel-and-dimed and had lost the partnership since the acquisition. Saint Art NY signed Tuesday, the only clean Closed-Won of the week

(P.2).

LEAD III · RETURNS

228 Poncho Customers Never Got Their Money

Willy Husted's Thursday investigation of a 931-row merchant spreadsheet split Poncho's Loop→GoodDay→ShipHero returns into five failure classes and nine Linear tickets. The worst: 228 orders restocked in ShipHero five-plus days ago with no refund fired, and 13 returns that never reached GoodDay at all (P.5).

ALSO INSIDE

What Else Made the Paper

Partnerships: Intuit opens the door on a \$150M-ARR product, and one wholesale API gap turns out to block three partners at once (P.3).

Eby closed July \$430,000 apart on inventory valuation — and a recon run wiped thousands of units (P.4).

The AI Desk watched two agents and a senior engineer agree on a database column that turned out to be deprecated (P.7).

"3 go lives in one day is absolutely a record and a major milestone for everyone at GoodDay!!!"

— HUNTER LEEMING, THU AUG 6 · #GOODDAY-TEAM

PIPELINE REPORT

Three Brands Leave RLM in One Week, and the Board Gets a Forecasting Religion

Fleur du Mal, DVF and Ramy Brook all move — every one of them on Bergen. Saint Art NY signs. And an outside advisor from Vanta walks the deal review through what single-threading costs.

SOURCES: #SALES-SUPPORT, #GO-TO-MARKET, GONG (FLATLEY, HENCY) · 15 CALLS

The week's pattern named itself. Fleur du Mal kicked off onboarding Monday, replacing RLM with Bergen Logistics on the back office — the first GoodDay merchant using Bergen's operations team rather than just its warehouse. Wednesday, Diane von Furstenberg demoed with Kelley Flatley and River Crawford, also on Bergen, also weighing whether to follow Bergen off RLM. Thursday, Ramy Brook's Jeff Green did the same. On that call Kyle Hency said GoodDay has already begun migrating clients off RLM, naming Guizio and Fleur du Mal, with a third signature expected the same day. Green's objection was not the software — he said he felt nickel-and-dimed and had lost the partnership value since the acquisition. His business is \$100M-plus, factored through Hildun, and ships exclusively by air; Kyle proposed a roughly twelve-week implementation and an in-person New York meeting inside the month.

The one clean signature was Saint Art NY, announced by River in #go-to-market Tuesday afternoon: "Saint Art NY signed!! " — followed immediately by the discovery that the customer had entered no billing details. Kyle's response set a rule for the desk: "We can email them later, but we want them to give us this as a part of signing. You have to ask and remind them through the signature process." Matt Wardell asked to be looped in for invoicing. In Tuesday's deal review, Saint Art was the only deal on the board sitting above best case.

That deal review is the other story. Kyle brought in outside sales advisor Eric Martin, three years at Vanta, and has booked him every other week through the end of September. Four themes came out: everyone preps their own deals, stage and close date and next steps go into HubSpot in advance, be explicit about commit versus most likely versus best case — and stop single-threading. Kyle admitted on the call he had never heard the concept before. Kelley's read in Slack: "Overall found meeting really helpful but I'd also like a more generic time with Eric to get more tactical tips on each part of our process." By Thursday, Meagan Herfkens Hency had shipped a forecast-category field on HubSpot deals.

COMMIT / VERBAL

- Saint Art NY — signed Tue Aug 4.
- Toccin — 3yr at \$6,500/mo proposed; CFO legal review.
- La Ligne — biggest deal on the board; in legal.
- Almina · Alice Walk · Ferrell · Three Nails — verbals.
- Kanga Coolers — ERP decision mid-Aug; moved to best case.

BLOCKERS NAMED

Walmart.com fulfilment won't ship before late Oct / early Nov, stalling Beef Cake Jerky. La Ligne's counsel triggered GoodDay's first DPA — now with Fenwick, plus a public subprocessor page (GD-13023). SOC 2 Type I is in progress with Vanta and a third-party auditor.

COMPLIANCE

La Ligne Asks for a DPA GoodDay Didn't Have

Their counsel wanted safeguards, breach notification and subprocessors — "Because we sell into the EU and UK, we need something on file." Kelley: "Do we have any DPAs? I don't think we've done one to my knowledge?" Dave Wardell routed it to Fenwick the same night, requesting EU Standard Contractual Clauses and the UK addendum. Ten subprocessors are named on the list now being published.

RENEWAL WATCH

Margaux Wants an Escalation Path in Writing

Emily Brauer Gill's wedge is a duty-cost adjustment flow producing negative on-hand — three failed attempts to correct costs. She wants a dedicated solutions engineer and a documented escalation process written into the renewal. Kyle offered a weekly exec cadence for one to three months. Behind it: a \$120–150M 2027 plan and Nordstrom launching in ten stores.

COMPETITIVE

Set Active Takes the Call GoodDay Suggested

River, Tuesday: "Set Active took a call with Crstl, which was our recommendation lol" — adding that the merchant has tunnel vision on its EDI problem and finds the idea of an ERP overwhelming while growing fast. Kyle messaged Rob 1:1 twenty-seven minutes later. He's in Los Angeles the week of August 13.

INTEGRATIONS & ALLIANCES

Intuit Finally Answers — and One API Gap Turns Out to Block Three Partners

After roughly a year of "too small," Evan Smith gets inside Intuit Enterprise Suite. Meanwhile EnvoyB2B, NuOrder and JOOR all want the same wholesale endpoints, and Orderful is stuck behind an outside integrator.

SOURCES: #PARTNERSHIPS, GONG (SMITH) · ~28 MESSAGES, 7 PARTNER CALLS

The door opened Friday morning. Evan Smith's twenty-one-minute call with Zachary Williams put GoodDay in front of Intuit Enterprise Suite — the multi-entity, up-market QuickBooks tier Intuit launched about a year ago, already at \$150M ARR against an ICP of \$10M-plus in revenue, built expressly to stop QuickBooks customers churning to NetSuite. Two facts make it live: IES and QBO share identical API endpoints, so a QuickBooks integration is automatically an IES integration; and Intuit is not investing in the inventory side and doesn't believe it's strong enough to hold customers. Evan pitched a crawl-walk-run — referral agreement, then deep IES integration, then strategic partnership — and Williams offered a joint webinar plus technical resources, with referral program details to follow. The complication is DOSS, which Dave Wardell notes Intuit Ventures invested in heavily and is trying to make the de facto IES partner. Evan's answer: "DOSS is a shell game, we will get in there."

The week's cleanest engineering ask came out of EnvoyB2B. Tom Rau's team has scoped a four-week, two-sprint build and is waiting on GoodDay for a sandbox, company createdAt/updatedAt, a customer-address array at the Company level, filtering and sorting on updatedAt for items, and a flag to mark which products are Envoy products. Evan's own note on the thread is the reason it belongs on the front of this page: "FWIW NuOrder will want this too as it's basically handled completely manually today. JOOR got back to me yesterday the integration is finally in active scoping with them and I bet they come request this as well." One gap, three partners. The Envoy marketing launch is on hold until the build ships, and the partner agreement — still the January 1 version covering only revenue and lead sharing — is sitting in legal with Tom saying he'll sign.

Orderful remained the slowest domino. It surfaced in three separate threads from three teams: James Hargett on Friday, Kyle on Monday, and river on Wednesday flagging that TomboyX will need it by around October. The blocker isn't GoodDay engineering — it's LYSI, Orderful's integration partner, sitting on a proposal. The useful discovery came Tuesday, when Hunter Leeming noted that LYSI cofounder Jim Beavers "was a consultant for us at Chubbies for awhile." Three warm paths to the man holding the proposal, none of them used until this week.

MATT PHAM'S DATE DEMAND

Thursday's most consequential post: a ranked request for delivery commitments, each with a merchant attached.

- **Katana** — C&C operators getting antsy
- **Style Arcade** — 12th Tribe can't set a go-live
- **JOOR** — Guizio asks periodically
- **Orderful** — Kismet, getting ahead of it
- **Ful Fill** — stable; 12th Tribe / Ryder

No reply in-thread by end of window — an open loop into next week.

LOOP RETURNS

60 Days Free, and a Joint Run at Unreal

Ryder Clayton and Evan built the shared enablement deck, put two offers on the table — 60 days free for Loop customers signing before October, plus a referral bonus through end of October — and lined up the ShipHero conference around Sept 16 with Kyle speaking. On Unreal: proposal sent, Kyle onsite around Sept 1–2, likely Q4 signature. Unreal runs Narvar today, so a GoodDay win is a Loop win. Honest note: the joint webinar produced no meaningfully attributed leads.

LENDING

Dwight Funding Wants the Costing Data

Jessica Bates said outright that Dwight refuses to integrate with most 3PLs because they can't supply accurate costing — and pressed on whether FIFO COGS holds up when tariffs move. Inventory reporting is the one un-automated piece of Dwight's stack; clients still self-report at month-end. The path Evan proposed: package each customer's BigQuery data for the borrower to hand to Dwight, since collateral data must come from the borrower.

CO-SELL

Pipe17 Brings the First Joint Deal

Tim Morse and Ryan Somrak opened a co-sell on a roughly \$70M apparel business trying to declutter a heavily-customized NetSuite and drop a ~\$60K/year iPaaS. Pipe17 owns order-source orchestration, GoodDay the financial layer. Tim already recommended GoodDay to the founder. The integration is scoped but unbuilt — and the two companies currently share zero customers.

DATE	PARTNER	COUNTERPART	TAKEAWAY
Jul 31	Intuit (QuickBooks / IES)	Zachary Williams	\$150M-ARR product, shared APIs with QBO, no inventory investment. Referral program details next week. DOSS is the incumbent.
Aug 3	ShipHero	Michael Kelly	Wholesale is real now — EDI-agnostic, UCC-128 labels, multi-picker, retailer rules. Mobile pick is Q3. One-pager and co-enablement agreed.
Aug 4	Dwight Funding	Jessica Bates, Hannah Jo	Lender referral path built on lot-level FIFO costing; BigQuery hand-off to the borrower.
Aug 5	EnvoyB2B	Tom Rau	Four-week build gated on sandbox, company timestamps, address array, Envoy product flag, and a signed agreement.
Aug 5	Pipe17	Tim Morse, Ryan Somrak	First co-sell; ~\$70M apparel account. Integration scoped, unbuilt. Zero joint customers today.
Aug 5	The Aggregate Co	Huyen Phan	Inbound via Ship Essential. Near-exact ICP overlap. Friction: no true multi-entity, no currency conversion. Follow-up next Wednesday.
Aug 6	Loop Returns	Ryder Clayton	Enablement deck, 60-days-free offer, referral bonus, ShipHero conference, joint pursuit of Unreal.

SEVEN PARTNER CONVERSATIONS IN THE WINDOW. EVAN ALSO SAT FOUR MERCHANT DEAL CALLS — TOCCIN TWICE, ANGLERCO AND VIGO SALES GROUP.

"DOSS is a shell game, we will get in there."

— EVAN SMITH, FRI JUL 31 · #PARTNERSHIPS

THE ONBOARDING BEAT

Four Merchants Cross the Line, and Eby Closes July \$430,000 Apart

Seth Horton ran a three-night go-live slate. Hunter cut Minnow off Cin7 with 88 SKUs of variance. And a reconciliation run at Eby wiped thousands of units of on-hand before the next morning fixed itself.

SOURCES: #MERCHANT-SUCCESS, #SERS-TAVERN, PYLON, GONG (MS TEAM) · 62 CALLS

Seth Horton posted the slate on Monday: Cloth & Paper Tuesday, Aaron Levine Wednesday, Over The Moon Thursday, all at 4 p.m. Eastern. Cloth & Paper landed first and best — live Tuesday, ahead of its original August 14 target, with GoodDay now source of truth for inventory while ShipHero keeps receiving and counts. Procurement moved off Inventory Planner entirely; reserves, safety stock, wholesale, DTC, subscription, COGS, QuickBooks invoicing and Amazon FBA all came with it. The merchant did it having lost the person who owned product creation across all their systems weeks before cutover, with Annie stepping in as new Head of Ops. The GoodDay-to-Shopify inventory push was deliberately held back while manual Shopify adjustments settled — Cheryl Perry declined to push on a Friday with a product launch the next day and the team at a conference.

Aaron Levine's Wednesday slipped to Thursday and then broke at the cutover, when the Scale integration began pulling other Scale customers' SKUs despite being scoped to the ALV business unit. Willy Husted's configuration fix got it live the same night. Over The Moon needed Kevin Samoei's Shopify tag filter, shipped that morning, to keep a 350,000-SKU catalog from overwhelming the first sync; around 800 archived wholesale-tagged products were approved for import and roughly thirty purchase orders queued for backfill. Minnow went the same evening under Hunter Leeming, taking the inventory flow directly from IDF's Bluebox WMS to Shopify and unplugging Cin7 — 88 items with variance over ten units, nearly 2,500 units in total, and a Director of Ops who left without SOPs, leaving Katie Hogan to run the cutover alone.

The hardest number of the week was at Eby. July's close came in with receipts fully accurate and in-transit close, but inventory valuation off by roughly \$430,000 — eight to ten percent. James Hargett traced it to transaction types that never flow into GoodDay: 301 orders and 2,879 units entered straight into Deposco in July, about 11,000 units of Amazon FBA transfers, 2,000 TikTok, 3,300 influencer — all landing as adjustments rather than COGS. Separately, a reconciliation run the previous day wiped thousands of units of on-hand from a Trackstar ingestion fault; the next morning's run pulled correctly. September is the target for the first month Eby closes primarily on GoodDay.

PYLON SNAPSHOT

Opened in window	~263
Issue range	9321–9583
Prior high (No. 12)	~227

Heaviest by merchant: Halfdays/Sand, Lola, Eby/Deposco, American Tall/ShipHero, Vee Collective, Stord/SPS. Seth ran Claude across the queue Wednesday and shipped a stale-ticket workbook with a tab per MS owner, flagging anything over a week old with no discussion.

DATES ON THE BOARD

- **Aug 11** — Cloth & Paper Shopify push
- **Aug 12** — Porte + Hall inventory disconnect
- **Aug 15** — Canopy at DCL
- **Sep 4–5** — ERD on GoodDay
- **11** go-lives expected in August

STRESS TEST

Lola Runs at 100,000 Orders

July sales came in 30% above budget, and Steven Feczko wanted to simulate the roughly 100,000 orders expected in two weeks. Noel Klein shipped a dedicated Shopify worker queue with throttling and a monitoring dashboard; the test began Thursday at 10 a.m. and had ingested 28,778 orders at 2.730 per second by 11:12 with no merchant interruption. Feczko's success bar wasn't zero delay — it was knowing in advance whether the delay is eight hours or eighteen.

ESCALATION

Hollow Socks Goes 799 Units Negative

A Sers Tavern triage thread became a process intervention when Dave Wardell forwarded it: "Are they ignoring recon? How could they go so far negative?" James spoke to Dan Tuesday morning and found draft receipts sitting since May and ShipHero POs left pending well past completed receipt, so automation never closed them. The push now is receipts-first, not recon-first, with the COGS consequence spelled out.

The ATS/ATP Double-Count

Vishal Marocha deployed a fix Wednesday for an availability push that double-counted PO units when a purchase order stayed open but individual lines were already received and closed — the same units counted as both on-hand and future incoming supply. Blast radius: Lola at roughly 2,700 units across 7 SKUs and Duvin at ~150 units across 14, one PO each.

From The Sers Tavern · Merchant Triage

The Channel The Team Uses To Diagnose, In One Pass. Fifty-four triage threads in seven days, and the pattern across the best of them was the same: the agent produced a fast root cause, a human pushed back, and the second or third answer was the one worth keeping.

Ten Thousand's missing two units. David Ortiz flagged a SKU showing zero on-hand in GoodDay against two in Outerspace. Ser blamed a SKU-string mismatch; David posted the screenshot proving otherwise, and Ser re-diagnosed: 40,896 delta rows, 969 with non-zero on-hand delta, and zero reconciliation outcomes — variances detected but never queued for acceptance. Willy Husted pulled the raw Trackstar payload, and David spotted the real fault: Outerspace's location number is suffixed where Trackstar expects NJ04.

DALA's vanishing feed. A ~710-item, roughly 65% coverage gap between what GoodDay tracks at Fulfillment Crowd and what the feed returns. Dave Wardell's verdict on the first answer — "You hallucinated somewhere along the way" — produced a corrected 98-SKU CSV and GD-12866, which Willy closed on Tuesday after widening the recon drop window from 30 days to 180.

American Tall's stuck receipts. The longest thread of the week, 21 replies. Seth pushed back three separate times, and each push improved the answer: two genuine duplicates created 39 milliseconds apart from the same webhook, one legitimate receipt whose allocation completed but whose status never advanced, and a merchant-level auto-receive setting behind the rest. Ser's closing line — there is no background sweeper that retroactively closes receipts with fully completed block items.

Eby's null UPCs. Three PO blocks failing to Deposco with HTTP 422. The integration maps SKU to UPC, so any item with a null UPC emits a null SKU. Matt Wardell's follow-up found the twist: the items exist, but their parent items were soft-deleted in March, so the merchant literally cannot add the UPCs through the UI.

Guizio's phantom dimensions. An import path minted four bogus dimension rows per parent, literally named "Dimension A Name" and "Dimension A Value," so chips rendered as "Dimension A Name COLOR." No UI path to fix — engineering surgery across three tables, with roughly 2,000 more SKUs queued for upload.

"You should NEVER instruct us to flip a feature flag / configuration as a critical step, you should only show it as a potential option but encourage caution."

— DAVE WARDELL, MON AUG 3 · #SERS-TAVERN

THE SHIP LOG

Fifteen Releases, One Eleven-Minute Brownout, and 228 Refunds That Never Fired

Rob Hatfield takes air traffic control and walks into a full board. A 654-kilobyte webhook takes the platform down for eleven minutes. And a returns pipeline at Poncho turns out to have been quietly failing five different ways.

SOURCES: #ENGINEERING, #CRITICAL-SUPPORT, #PRODUCT-SUPPORT, LINEAR

Rob Hatfield picked up ATC on Monday and opened with the observation that says most of what needs saying: "Follow up to my first ATC question. The Linear critical support view has quite a few tickets. " He shipped or drove at least six fixes across the week — a Server Components crash on purchase orders containing an item with no parent, a Bogey Bros export failing on a Rust string conversion, a Google Workspace Marketplace geo-restriction that blocked Salt Gypsy in New Zealand, a transfer-order closure using the wrong ledger transaction type at Still Here, and a Margaux currency bug that Ser blamed on vendor-record ordering and Rob traced to the CSV importer. Two hundred-plus purchase orders were converted back to euros the same day; the permanent fix is GD-13016.

Monday's slowdown began at 7:58 a.m. Pacific when James Hargett reported the platform running very slow. The root cause landed inside the hour: a 654-kilobyte Shopify events message hit the worker at 14:51:43 UTC and held a Cloud SQL connection for 48 seconds before failing with a 500, driving the connection count from about 1,040 to 1,451. Because web-api-prod shares the instance, transfer-order fulfillment and sales-order detail queries queued behind it and p99 latency hit 4,300 milliseconds. A second burst at 15:08 exhausted worker instances and produced ten-plus 429s with a p99 of 58 seconds. The whole thing self-resolved in roughly eleven minutes when the job timed out. Dave Wardell's architectural read, two days later: state-based workflow management with replays looks safer than the current webhook handling as the platform scales.

The week's deepest hole was at Poncho Outdoors. Willy Husted spent Thursday running Temporal workflow analysis, read-replica queries and worker logs against a 931-row merchant spreadsheet and bucketed every order into a failure class. The result was nine Linear tickets filed in under thirty minutes: 228 orders restocked in ShipHero five or more days ago whose refunds never fired because GoodDay never closed the return; 110 authorized in GoodDay whose ShipHero push still failed; 34 stuck in draft; 15 parked in retryable error; and 13 true drops where the return never reached GoodDay at all — the most severe class, because those returns are invisible to the system. Dave pulled Noel and Ashwin onto it Thursday evening and approved sharing GoodDay's internal tracking sheet directly with the merchant: "Let's be VERY transparent with them about any issues and where we are at."

SHIP METRICS	
Prod deploys	15
Version range	139.6→140.11
PRs merged	86
Output vs prior wk	−21.4%
Feature ratio	55.6%
Schema drift green	0/15
Top contributors by Workweave score for Jul 28–Aug 3: Vishal Marocha 214.3, Ashwin Pai 98.9, Kevin Samoei 49.8, Harish Chandramowli 45.4, Noel Klein 38.3. Harish was on PTO for the reporting week itself.	

REVENUE LEDGER

The Reset Tool Finds Its Own Bug

v0.139.6 shipped operator-driven wipe-and-rebuild for a single merchant's revenue ledger. Within 48 hours the workflow livelocked ninety minutes into a Prepared Hero rebuild and made zero forward progress for about eight hours — eleven worker claims in a seven-minute window, each taking 100 states and completing none, because the stale-reclaim window equals the lock lease. Vishal filed GD-12873 at 7:17 a.m. and closed it the same day.

SCALE WALL

Recon Stops Finishing at 94,000 Rows

The legacy GoodDay-to-Shopify reconciliation query aggregates one row per item, lot, channel and location — and no longer completes at roughly 94,000 rows. Poncho's had not finished for five consecutive nights; Hill House Home hit it too. Willy's assessment: "I think this is urgent." GD-12853 is in progress with Sai Ancha.

IMPORTER

Three Dimensions and Not One More

Ten Thousand re-uploaded a GoodDay export whose headers still carried parentheticals, creating duplicates instead of updates. Kevin Samoei removed 3,621 duplicate dimension rows across 1,107 items — then found the real defect on re-upload: the importer silently writes only the first three dimensions per item. Across 8,796 values written, not one landed past the third slot. Inseam got zero.

DATE	MERCHANT / SYSTEM	SYMPTOM	RESOLUTION	TICKET
Jul 31	wear DALA @ Fulfillment Crowd	98 SKUs not reconciling; 93 dropped from the feed	Recon drop window widened 30→180 days; 67 items in the wider run	GD-12866
Jul 31	Eby — inventory exports	Exports stuck at "almost done"; blocked July close	Stuck pending messages cleared; permanent fix in review	GD-12874
Aug 3	Platform (Normal Brand, Halfdays)	p99 4,300ms; 1,451 SQL connections	Self-resolved in ~11 min; RCA same hour	—
Aug 3	Prepared Hero — revenue ledger	Drain livelocked; ~8 hrs zero progress	Fixed and closed same day	GD-12873
Aug 3	Still Here — receipts	Empty receipt treated as a fulfillment cancellation	Ledger transaction type corrected; done Aug 6	GD-12894
Aug 3	Hill House Home — GD Sheets	72,116-row export truncated at Sheets' 70,000 limit	Diagnosed; open at end of window	—
Aug 4	Minka Dink London — PO page	Render crash on a PO with a parentless item	Guard shipped in hotfix v0.140.4	GD-12913
Aug 4	Bogey Bros — SO export	HTTP 500 on CSV; Sheets stuck at row 72,226	Hotfix deployed Aug 5 morning	GD-12923
Aug 4	Paka Apparel — warehouse	227-unit variance, UI 957 vs MCP 730	Lot-grain misclassification fixed same day	GD-12835
Aug 5	Ten Thousand — dimensions	Duplicate dimensions from an export re-upload	3,621 rows removed; importer ceiling found	GD-12951
Aug 5	Salt Gypsy — GoodDay Sheets	Marketplace app blocked in New Zealand	App regions updated; resolved in ~23 hrs	GD-12965
Aug 6	Kenny Flowers — Charleston	Transfer left phantom committed stock on 25 SKUs	Cleared within the hour ahead of a 2pm call	GD-13013
Aug 6	Margaux — purchase orders	200+ POs created in USD instead of EUR	Converted same day; importer fix in progress	GD-13008
Aug 6	Poncho — Loop returns	931-row failure list across five classes	Nine tickets; unresolved at end of window	GD-13025 +8

FOURTEEN INCIDENTS FROM #CRITICAL-SUPPORT AND #ENGINEERING. URGENT AND STILL OPEN AT THE CLOSE OF THE WINDOW: GD-13025, GD-13028, GD-12525, GD-13013.

"There are effectively 3 go lives this evening... Hold off on deploys rest of day unless necessary."

THE PROJECT DESK

Scott Takes a Chainsaw to Parent Items, and a Date Column Turns Out to Be Dead

A simplification spec, a made-to-order partnership shaped, two verified dbt bugs, a POS decimal that shouldn't exist — and an Amazon warehouse question answered by finding out Amazon controls the warehouse.

SOURCES: 10 PROJECT CHANNELS · 8 ACTIVE, 2 QUIET

Scott Meadows opened Tuesday with what he called a major simplification of parent items, arguing they are "a simple container" whose editable fields are "a hangover from the item details template." Out: Attributes, Connections, Data Flow, Item Details, Focussed Attributes, Prices and customs, Pre-sales. In: the item list, the bulk price and customs actions, and the bulk-editor entry point. He shipped three screenshots and a 237-megabyte walkthrough recording. Troy Lowe's reply on Wednesday accepted the direction but flagged three keepers — parents do hold a connection, they hold all dimensions and images as attributes, and merchants can edit the item search index. Scott's counter-question is the interesting one and is still open: is the absence of connections and attributes rendering on parents actually a bug?

The busiest channel was BI and Data Warehouse, where two verified bugs and one deprecation landed. Duvin's over-fulfilled orders never re-entered the incremental merge window because the app never bumps `updated_at` when a fulfillment is cancelled — seventeen rows still sitting at a fill rate of 2.0 or higher (GD-12867). Bogey Bros' null payment totals traced to an inner join on payment terms by merchant ID, which silently excludes global terms at merchant zero, with a blast radius of any sales order at any merchant on a global term (GD-12960, GD-12961). And James Hargett's simple question about which field holds a purchase-order block's ETA ran thirty-three replies before Eby reported the field is always null: zero of 17,494 in-transit-eligible lines populate `current_fulfillment_date`, against 16,659 — 95% — on `expected_fulfillment_date`. Troy's verdict: the column is deprecated.

CHANNEL TRAFFIC

BI & Data Warehouse	~73

ITEM MANAGEMENT

GoodDay as the Made-to-Order Backbone

Dave Wardell's call with Stefan Vermaas of Codeture settled the shape of the OrderKraft partnership: GoodDay is the opinionated backbone — inventory ledger, item master, BOMs and components, work orders, lot-level FIFO — and OrderKraft owns production-stage orchestration, customer messaging and the manufacture-or-not decision. Strong agreement against splitting manufacturing SKUs from sell SKUs; one SKU plus line-item attributes. Lot-specific attachment to a sales order is explicitly out for launch. A September technical sync is agreed, and the integration is now on GD-11139.

ORDER MANAGEMENT

Amazon AWD Folds Into One Location

Should a second Trackstar warehouse for Amazon AWD get its own GoodDay location? Sai Ancha argued to keep it separate since nothing fulfills out of it. The answer came from the merchant side: David Ortiz confirmed with Sam that Amazon alone controls AWD-to-FBA movement and Canopy has no say. Dave's call: one location per Amazon region, with AWD mapped sellable or unsellable depending on how the data arrives for Prepared Hero.

DCL on the Clock for August 20

Seth Horton's end-of-week DCL update had integration and database design complete, schema and warehouse registrations done, per-warehouse inventory sync and fulfillment posting done, order import and transfer-order applications in progress. Dev completion August 7, customer validation the 10th through the 12th, GoodDay's internal target the 20th. Seth's read on DCL's own timing, from a 3PL background: he could not imagine doing a switchover like this for all their clients going into Q4.

RETAIL POS

A Plus-One That Returns .001

The Normal Brand's Liesel Pollman reset a receipt count to zero, pressed plus-one, and got .001. Filed high priority with a POS extension label — then Noel Klein corrected the diagnosis inside the hour: the video showed the browser receipt UI, not the extension, and the bug affects all receipts. Rob Hatfield couldn't reproduce it until he found the trigger: any unit of measure other than "each," or an unset one, which is exactly TNB's situation because they are still on Items v1 with no UOM field. Hotfix out Thursday morning. The broader question James raised Monday still stands — Still Here, TNB, Kenny Flowers and Hill House Home have all reported extension problems, and Lola opens a retail store in the second week of September wanting POS receiving training.

ACCOUNTING INITIATIVE

The Revenue Ledger Grinds Toward Beta

Dave's notes from Tuesday's test review flagged an unearned-revenue location mismatch — booked at e-commerce Austin, relieved at the retail store fulfillment location — with the preferred fix being relieve-at-original, recognize-at-new, by analogy to the inventory ledger. An unexplained \$100 in an order-edit scenario is still untraced. UI gaps logged: order number and transaction type on the journal entry table, a duplicated account bucket column, a line-versus-header distinction with SKU. Raw event capture is on for Eby, Paka, Poncho and Laundry Sauce, with HbarC added Thursday as the low-volume beta. Prepared Hero's GMA flash sale went live August 3 without a channel segmentation rule, so a replay is coming.

Cross-project: the Items v1-to-v2 migration is now a recognisable source of latent bugs — TNB's decimal stepper traced to a missing UOM field, the SKU lock icon driven by the block_sync column, global dimension ordering (GD-12855), and Scott's parent-item simplification all sit on the same migration. Matt Pham brought seven merchants to VOTM for v2 migration: ERD, Kismet Pets, Guizio, Clayton & Crume, Salt Gypsy, Local Eclectic and 12th Tribe.

"I should checked myself, AI's description matched what I remember but it was changed a long time ago... current_fulfillment_date seems to be deprecated now."

— TROY LOWE, WED AUG 5 · #PROJECT-BI-AND-DATA-WAREHOUSE

SER V3 · MACROSCOPE · MCP SERVER

The week the agents got a bug-intake process, a confidence readout, and a named owner.

AGENTS & MCP

"Seems to Me Like Ser Is Getting Less Reliable Lately"

James Hargett’s Tuesday question turned agent complaints into a Linear project with Willy Husted’s name on it — while two agents and a senior engineer confidently agreed on a database column that was dead.

SOURCES: #PROJECT-AI, #MCP-LAUNCH-SKILLS, AGENT THREADS

The question that framed the week came from James Hargett on Tuesday morning: "Seems to me like Ser is getting less reliable lately. Is there a process we should be following to surface these issues so we can address the logic behind the response. Should we create tickets and post them in this channel?" Dave Wardell's answer on Wednesday: yes, there's a Linear project, tickets are accumulating, and they get tackled in bunches once Harish is back. The project has a name and an owner — Ser V3, led by Willy Husted, covering work, bugs and improvements to the alert-triage agent. Dave then filed a ticket conversationally in-thread, asking Ser to distinguish GoodDay Sheets from the Data Warehouse from Sigma and route accordingly. Elapsed time from request to filed ticket, GD-12948: twenty-four seconds.

The failure that prompted it is instructive. James reported that the Sales Order Payment Terms tab of GoodDay Sheets had no orders after July 22. Ser's first answer, seven minutes and \$1.44, was a genuinely good root-cause analysis of the wrong system — it blamed a Sigma workbook running against the dev connection, and the report in question isn't a Sigma report. James: "Why are you referencing Sigma? This is not a sigma report." The corrected answer was right and useful: the in-sheet refresh button runs the Apps Script add-on and never re-calls the GoodDay API, which is exactly why it completes in milliseconds. Ser also identified the merchant unprompted from account names visible in the screenshot, and flagged the real caveat — only sales orders with an installment schedule appear in that export at all, so of roughly 396,000 orders after July 22, just 32 qualify. Rob had it code-complete inside nineteen hours.

Then came the column that wasn't there. Asked which BigQuery field maps to a purchase-order block's ETA, Ser answered `current_fulfillment_date` at 95% confidence, marked verified. Dave brought in a second agent, Macroscope, which independently confirmed it from the Prisma schema through dbt into BigQuery. Troy validated it from memory. Everyone signed off Tuesday evening. On Wednesday afternoon the Eby team reported the field is always null — and Ser came back in forty-one seconds at 99% with the numbers: zero of 17,494 lines populated. Macroscope confirmed there is no application write path at all, and flagged that `days_past_eta` and `eta_date_slipped` may be wrong downstream as a result. Troy's line — "this should be one of those things you can count on it getting right, grr" — is the honest summary of the week's AI story.

SER TELEMETRY, SIX ANSWERS

Total cost	\$7.15
Total tokens	49.3k
Fastest	41.3s
Slowest	7m05s
Confidence range	40–99%

Every answer now ships with runtime, confidence, verification state, cost and token count. Calibration is imperfect: the 40% unverified answer was indeed wrong, the 99% verified one was the best of the week — but a 95% "verified" answer was also wrong. Every Ser reply in these threads carries exactly one and one .

MCP TRUST

"Doesn't Trust the Numbers"

Kyle Hency escalated to Matt Pham and Harish on Wednesday: is anyone else hearing that MCP returns inaccurate inventory levels? Bogey Bros has, and doesn't trust them. Matt confirmed within two minutes that he's filing tickets as feedback surfaces. Dave asked for the list, offered Ashwin for a couple that week, and named the prioritisation problem plainly — inventory issues versus sales-order installment gaps in the warehouse and API versus the order-creation tool. The tickets live in the MCP Server Linear project.

SKILLS

Split and Reassign, Live at Two Merchants

Lola and Hollow Socks are both running the split-and-reassign MCP skill — for purchase orders, not shipments. For both, the agent can take a packing list, recognise that each container is one block, and create the PO accordingly. Matt tested a live prompt against production Tuesday and it worked. The gap he filed for Harish: it can't create a shipment in the same operation. Seth confirmed that isn't a blocker for NADs as long as the CSV tool holds.

FIELD ADOPTION

MCP as an Accountability Tool

Dave asked Matt on Thursday to set up MCP training with Dave Devine at Prepared Hero. The framing is the part worth keeping: Devine is "mostly excited to leverage MCP to hold his ops team accountable and he's using Claude a bunch already." Turnaround from request to Matt reaching out: forty-two minutes.

TOOLCHAIN

The Terminal Wins on Ergonomics, Not Preference

Scott asked the office question of the week: is anyone running Claude in the desktop app, because staring at a terminal all day is "a little bit dystopian/matrix." Dave's answer is the most informative line anyone has written about GoodDay's internal AI stack — he uses the desktop app but is so-so on it, because "Terminal is more flexible and easier to set things up, particularly for our harness which requires multiple CLIs." GoodDay runs Claude, Codex and Macroscope side by side; the terminal wins because of the harness, not because anyone prefers it.

INDUSTRY

Shopify Ships WebMCP

Shopify added WebMCP support for Liquid and Hydrogen storefronts: online stores now expose tools an AI agent can call directly — searching the catalog, managing the cart, moving to checkout — in the tab the shopper is already looking at, replacing the current approach where agents read page code and simulate clicks. Dave forwarded the changelog into #project-ai with a one-line frame: "Further support for our test store agents." The only external-industry item on the page, and it points the same direction as the internal work.

"Owned — I pointed to current_fulfillment_date as the PO block ETA, but fulfillment date is a sales order concept, not a PO one."

— SER REKONALOT (AGENT OUTPUT), TUE AUG 4 · AGENT THREAD

COMPANY LIFE

A Record Thursday, a New Hotel, and a Gazette Nobody Could Open

Three go-lives in a day draws the loudest channel reaction of the year. The offsite moves to Hotel Magdalena. And the paper you are reading spent a week locked behind an access wall.

SOURCES: ALL HANDS (WK OF 08/03), VOTM (AUG 6), #GOODDAY-TEAM

Thursday's three go-lives produced the week's biggest moment in #goodday-team. Hunter Leeming called it a record and a major milestone; Kyle Hency's reply — "Wow — epic day and congrats! Beastly contributions... Team effort and handling real complexity" — named Seth Horton, River Crawford, Willy Husted, Kevin Samoei and a supporting cast. Two days earlier Seth had posted Cloth & Paper's launch with the line that fits the whole week: "Got them live today, and honestly this one was a grind! ... We even beat the original 8/14 target!" Saint Art NY signed on Tuesday, a referral from Kirstie Kelly, and Duvin updated their public review to five stars, credited to Seth.

Wednesday's All Hands rotated personal updates to Engineering and Product, with Dave Wardell reporting from New York retail visits and Rob Hatfield contributing a video captioned "Turtled on some rocks. I didn't think I'd make it, but I had to try!" The Merchant Corner carried David Ortiz's proposal to auto-map Shopify products sharing a SKU to a single GoodDay item at app install, rather than minting duplicates and cleaning up afterwards — the same item VOTM ticked closed on Thursday. Kyle's GTM note: "a really strong roster of brands stacked up for next month: Nectar, Left On Friday, UNRL, House of Noa." The parking lot held lot-rebalancing review, defaulting new brands to Items v2, and takeaways from the previous week's performance issues.

COMINGS & GOINGS

- **Harish** — OOO all week; named as the gate on Ser V3, MCP tickets and the Duvin follow-up.
- **Rob Hatfield** — ATC Aug 3–9.
- **No new hires, departures, birthdays or anniversaries** announced this window.

FY26 ONSITE

Aug 18–20. Out-of-towners are now booked at **Hotel Magdalena** — Carpenter reservations were cancelled, so check your email and confirm. Full-team dinner is Wednesday night, confirmed by Kyle. Tentative future onsites: Oct 13–15, Jan 12–14.

VOICE OF THE MERCHANT

Seven Merchants Queued for Items v2

Thursday's VOTM ran WMS prioritisation, Hunter's pre-inventory go-live analysis, and James on enabling Items v2 — then Matt Pham brought a migration list: ERD, Kismet Pets, Guizio, Clayton & Crume, Salt Gypsy, Local Eclectic and 12th Tribe. Seth raised Matrixify inventory updates for Cloth & Paper's Recharge subscriptions and a recon reversal dashboard. The one parking-lot item marked complete was the duplicate-SKU-on-install problem. Still open: a bulk "Mark as Paid" action and bulk QuickBooks invoice creation, raised for Prepared Hero.

THIS PAPER

The Gazette Spent a Week Behind the Door

No. 12 went out Friday and immediately hit an access problem. Kyle: "If we can't get the whole team the ability to view this, we should stop sending it. It's really fun/valuable, so I'd just like to get the whole team access." Dave offered free view-only Vercel seats; Evan still couldn't get in; the offer was reposted Monday. Noel, quoted in No. 12 for something entirely mundane, took it well: "Haha, I will forever be famous for getting quoted for something as banal as this." He also caught a date error on the masthead — corrected in this issue.

"Wow — epic day and congrats! Beastly contributions... Team effort and handling real complexity."

— KYLE HENCY, THU AUG 6 · #GOODDAY-TEAM

THE GOODDAY GAZETTE · Vol. I No. 13 · Issued Friday, August 7, 2026 · Reporting July 31 – August 7, 2026.

Compiled from 18 internal Slack channels, 88 Gong calls (62 Merchant Success, 15 sales, 11 partnerships), ~263 Pylon tickets, Linear, and Notion (All Hands / VOTM). The ~263 ticket figure is derived from the highest and lowest issue numbers in the window (9583 – 9321 + 1); minor gaps exist in the sequence, so treat it as an approximate upper bound — it nonetheless clears every prior tracked week, above No. 12's ~227 and No. 5's 202. The 86-PR and ~21.4% output figures come from Workweave's week in review covering July 28 – August 3, which overlaps but does not exactly match this reporting window. Both the All Hands (meeting Aug 5) and VOTM (meeting Aug 6) Notion pages are agenda documents with Status "Upcoming" — no decisions or action items were recorded, and all metrics on those pages live inside screenshots, so no figure on P8 is attributed to them. Empty project channels omitted: #project-csv-imports, #project-ag-grid. Gong transcriptions of "ShipHero" corrected throughout. Ramy Brook's revenue was given two different ways on the same call and is reported here as \$100M-plus. Internal-only; access-gated via Vercel Auth. Set in Bodoni, Iowan Old Style, and Courier New. All the inventory that's fit to print.
